

Send me these, get a quote

For a simple swap, or a quick check before you book a Workup. With these photos and numbers I can tell you if it fits, what needs to change, and give you a flat-rate quote.

1 · APPLIANCE INFO

- **New appliance:** brand and full model number (it's on your order or receipt).
- **Old appliance, if there is one:** brand and model. On most fridges the label is inside at the top or behind the bottom grille.
- **Where you bought it** and the delivery date.

2 · PHOTOS

- 1 The whole kitchen,** from far enough back to see the space
- 2 The opening,** straight on, with nothing in it if possible
- 3 Tape across the width** at the top and at the bottom
- 4 Tape for the height,** floor to the cabinet or soffit above
- 5 Inside the opening:** outlet, gas stub, water line or drain
- 6 Hoods:** the duct at the ceiling or wall, and the ceiling height
- 7 The way in:** front door, any stairs and the tightest turn
- 8 The rating label** on the new appliance, if it's delivered

3 · MEASUREMENTS

MEASURE	HOW
Width	At the top, middle and bottom of the opening. Write down the smallest.
Height	Finished floor to the underside of the cabinet or soffit, on the left and right.
Depth	Front of the cabinets to the back wall.
Hoods	Cooktop to ceiling, and how far the existing duct hangs down.

Measure the opening, not the old unit

Spec sheets list the opening a new appliance needs, and it's often different from what was there before.

Show the number in the photo

Lock the tape, keep it flat, and make sure the reading is in focus.

Ready? Send a request at
installkc.com/contact

Choose what you need and add your ZIP code. **I'll text you back**, and you can reply to that text with your photos. New build, remodel or panel-ready units? A **Pre-Install Workup** is usually the better fit.
